

**Airplane Design Part VI:
Preliminary Calculation of Aerodynamic Thrust and Power Characteristics
Table of Contents**

TABLE OF SYMBOLS

ACKNOWLEDGEMENT

1. INTRODUCTION

2. IMPORTANT DEFINITIONS

2.1 FLOW REGIME DEFINITIONS

2.1.1 Subsonic Flow Regime

2.1.2 Transonic Flow Regime

2.1.3 Supersonic Flow Regime

2.2 IMPORTANT GEOMETRIC DEFINITIONS

2.2.1 Wing Planform Geometries

2.2.2 Empennage Planform Geometries

3. SUMMARY OF DRAG CAUSES AND DRAG MODELLING

3.1 PHYSICAL CAUSES OF DRAG

3.2 DRAG BREAKDOWN METHOD

3.3 DRAG MODELLING FOR PERFORMANCE CALCULATIONS

4. POLAR PREDICTION METHODS

4.1 DRAG BREAKDOWN PROCEDURE

4.2 WING DRAG COEFFICIENT PREDICTION

4.2.1 Subsonic Wing Drag Coefficient

4.2.1.1 Wing zero-lift drag coefficient

4.2.1.2 Wing drag coefficient due to lift

4.2.2 Transonic Wing Drag Coefficient

4.2.2.1 Wing zero-lift drag coefficient

4.2.2.2 Wing drag coefficient due to lift

4.2.3 Supersonic Wing Drag Coefficient

4.2.3.1 Wing zero-lift drag coefficient

4.2.3.2 Wing drag coefficient due to lift

4.3 FUSELAGE DRAG COEFFICIENT PREDICTION

4.3.1 Subsonic Fuselage Drag Coefficient

4.3.1.1 Fuselage zero-lift drag coefficient

4.3.1.2 Fuselage drag coefficient due to lift

4.3.2 Transonic Fuselage Drag Coefficient

4.3.2.1 Fuselage zero-lift drag coefficient

4.3.2.2 Fuselage drag coefficient due to lift

4.3.3 Supersonic Fuselage Drag Coefficient

4.3.3.1 Fuselage zero-lift drag coefficient

4.3.3.2 Fuselage drag coefficient due to lift

4.3.4 The Area Rule Concept

4.4 EMPENNAGE DRAG COEFFICIENT PREDICTION

4.4.1 Subsonic Empennage Drag Coefficient

4.4.1.1 Empennage zero-lift drag coefficient

4.4.1.2 Empennage drag coefficient due to lift

4.4.2 Transonic Empennage Drag Coefficient

4.4.2.1 Empennage zero-lift drag coefficient

4.4.2.2 Empennage drag coefficient due to lift

4.4.3 Supersonic Empennage Drag Coefficient

4.4.3.1 Empennage zero-lift drag coefficient

4.4.3.2 Empennage drag coefficient due to lift

4.5 NACELLE/PYLON DRAG COEFFICIENT PREDICTION

4.5.1 Isolated Nacelle/Pylon Drag Coefficient

4.5.1.1 Nacelle drag coefficient

4.5.1.2 Pylon drag coefficient

4.5.2 Installed Nacelle/Pylon Drag Coefficient Increment

4.5.2.1 Wing/nacelle interference drag coefficient

**Airplane Design Part VI:
Preliminary Calculation of Aerodynamic Thrust and Power Characteristics
Table of Contents**

- 4.5.2.2 Fuselage/nacelle interference drag coefficient
- 4.5.2.3 Cooling drag coefficient increment
- 4.5.3 Windmilling Drag and Propeller Drag Coefficients
 - 4.5.3.1 Windmilling drag coefficient due to jet engines
 - 4.5.3.2 Windmilling drag coefficient due to propellers
 - 4.5.3.3 Drag coefficient due to a stopped propeller
- 4.6 FLAP DRAG PREDICTION
 - 4.6.1 Flap Profile Drag Increment
 - 4.6.2 Induced Drag Increment due to Flaps
 - 4.6.3 Interference Drag Increment due to Flaps
- 4.7 LANDING GEAR DRAG PREDICTION
- 4.8 CANOPY/WINDSHIELD DRAG PREDICTION
 - 4.8.1 Canopy Drag Prediction
 - 4.8.2 Windshield Drag Prediction
- 4.9 STORE DRAG PREDICTION
- 4.10 TRIM DRAG PREDICTION
 - 4.10.1 Trim Drag Due to Lift
 - 4.10.2 Trim Drag Due to Profile Drag
- 4.11 INTERFERENCE DRAG PREDICTION
- 4.12 MISCELLANEOUS DRAG PREDICTION
 - 4.12.1 Drag Due to Spoilers (or Speed Brakes)
 - 4.12.2 Drag Due to Surface Roughness
 - 4.12.3 Drag Due to Other Causes
- 4.13 DRAG ADJUSTMENTS FOR LAMINAR FLOW
- 5. AIRPLANE DRAG DATA
 - 5.1 DRAG POLARS
 - 5.2 EQUIVALENT PARASITE AREAS
 - 5.3 OSWALD'S EFFICIENCY FACTORS
 - 5.4 EXAMPLES OF WETTED AREA BREAKDOWNS
 - 5.5 VERIFICATION OF REALISM OF COMPUTED DRAG POLARS
- 6. INSTALLED POWER AND THRUST PREDICTION METHODS
 - 6.1 POWER EXTRACTION REQUIREMENTS
 - 6.1.1 Piston-propeller Driven Airplanes
 - 6.1.2 Turbopropeller and Jet Driven Airplanes
 - 6.2 INLET SIZING AND INTEGRATION
 - 6.2.1 General Inlet Arrangements
 - 6.2.1.1 Piston engine inlets
 - 6.2.1.2 Turbopropeller inlets
 - 6.2.1.3 Jet engine inlets: subsonic
 - 6.2.1.4 Jet engine inlets: supersonic
 - 6.2.2 Inlet Sizing
 - 6.2.2.1 Piston engine installations
 - 6.2.2.2 Turbopropeller installations
 - 6.2.2.3 Jet engine installations: subsonic
 - 6.2.2.4 Jet engine installations: supersonic
 - 6.2.3 Inlet Pressure Loss Estimation
 - 6.2.3.1 Piston engine inlets
 - 6.2.3.2 Turbopropeller inlets
 - 6.2.3.3 Jet engine inlets: subsonic
 - 6.2.3.4 Jet engine inlets: supersonic
 - 6.2.4 Inlet Extra Drag Estimation
 - 6.2.4.1 Piston engine inlet extra drag
 - 6.2.4.2 Turbopropeller inlet extra drag
 - 6.2.4.3 Jet engine inlet extra drag: subsonic

**Airplane Design Part VI:
Preliminary Calculation of Aerodynamic Thrust and Power Characteristics
Table of Contents**

- 6.2.4.4 Jet engine inlet extra drag: supersonic
- 6.3 EXHAUST OR NOZZLE SIZING AND INTEGRATION
 - 6.3.1 General Exhaust/Nozzle Arrangements
 - 6.3.1.1 Piston engine exhausts
 - 6.3.1.2 Turbopropeller nozzles
 - 6.3.1.3 Jet engine nozzles: subsonic
 - 6.3.1.4 Jet engine nozzles: supersonic
 - 6.3.2 Exhaust/Nozzle Sizing
 - 6.3.2.1 Piston engine exhausts
 - 6.3.2.2 Turbopropeller nozzles
 - 6.3.2.3 Jet engine nozzles: subsonic
 - 6.3.2.4 Jet engine nozzles: supersonic
 - 6.3.3 Estimation of Exhaust/Nozzle Extra Drag
 - 6.3.3.1 Piston engines
 - 6.3.3.2 Turbopropeller engines
 - 6.3.3.3 Jet engines: subsonic
 - 6.3.3.4 Jet engines: supersonic
- 6.4 PREDICTION OF INSTALLED POWER AND THRUST
 - 6.4.1 Propeller Driven Airplanes
 - 6.4.1.1 Piston propeller driven airplanes
 - 6.4.1.2 Turbopropeller driven airplanes
 - 6.4.2 Jet Driven Airplanes
 - 6.4.2.1 Subsonic operations
 - 6.4.2.2 Supersonic operations
- 7. INSTALLED POWER AND THRUST DATA
 - 7.1 PROPELLER DRIVEN AIRPLANES
 - 7.1.1 Piston Propeller Driven Airplanes
 - 7.1.2 Turbopropeller Driven Airplanes
 - 7.2 JET DRIVEN AIRPLANES
 - 7.2.1 Subsonic Operations
 - 7.2.2 Supersonic Operations
- 8. LIFT AND PITCHING MOMENT PREDICTION METHODS
 - 8.1 PREDICTION OF LIFT COEFFICIENT VERSUS ANGLE OF ATTACK
 - 8.1.1 Airfoil Lift and Maximum Lift: Flaps Up
 - 8.1.1.1 Airfoil zero-lift angle of attack
 - 8.1.1.2 Airfoil lift curve slope
 - 8.1.1.3 Airfoil linear range of angle of attack
 - 8.1.1.4 Airfoil angle of attack for maximum lift
 - 8.1.1.5 Airfoil maximum lift coefficient
 - 8.1.1.6 Construction of airfoil lift curve: flaps up
 - 8.1.2 Airfoil Lift and Maximum Lift: Flaps Down
 - 8.1.2.1 Airfoil lift increment due to flaps
 - 8.1.2.2 Airfoil lift curve slope due to flaps
 - 8.1.2.3 Airfoil maximum lift increment to flaps
 - 8.1.2.4 Construction of airfoil lift curve: flaps down
 - 8.1.3 Wing Lift and Maximum Lift: Flaps Up
 - 8.1.3.1 Wing zero-lift angle of attack
 - 8.1.3.2 Wing lift curve slope
 - 8.1.3.3 Wing linear range of angle of attack
 - 8.1.3.4 Wing maximum lift coefficient: $CL_{max,w}$ and wing angle of attack for maximum lift
 - 8.1.3.5 Construction of wing lift curve: flaps up
 - 8.1.4 Wing Lift and Maximum Lift: Flaps Down
 - 8.1.4.1 Wing lift increment due to flaps
 - 8.1.4.2 Wing lift curve slope due to flaps

**Airplane Design Part VI:
Preliminary Calculation of Aerodynamic Thrust and Power Characteristics
Table of Contents**

- 8.1.4.3 Wing maximum lift increment due to flaps
- 8.1.4.4 Construction of the wing lift curve: flaps down
- 8.1.5 Airplane Lift and Maximum Lift: Flaps Up
 - 8.1.5.1 Airplane zero-lift angle of attack
 - 8.1.5.2 Airplane zero-angle-of-attack lift coefficient
 - 8.1.5.3 Airplane lift curve slope
 - 8.1.5.4 Airplane linear range of angle of attack
 - 8.1.5.5 Airplane maximum lift coefficient: CL_{max} and airplane angle of attack for maximum lift
 - 8.1.5.6 Construction of airplane lift curve: flaps up
- 8.1.6 Airplane Lift and Maximum Lift: Flaps Down
 - 8.1.6.1 Airplane lift increment due to Flaps
 - 8.1.6.2 Airplane lift curve due to flaps
 - 8.1.6.3 Airplane maximum lift increment due to flaps
 - 8.1.6.4 Construction of airplane lift curve: flaps down
- 8.1.7 Airplane Lift in Ground Effect
 - 8.1.7.1 High aspect ratio configurations: transports
 - 8.1.7.2 Low aspect ratio configurations: fighters
- 8.1.8 Power Effects on Airplane Lift
- 8.2 PREDICTION OF PITCHING MOMENT COEFFICIENT VERSUS LIFT COEFFICIENT
 - 8.2.1 Airfoil Pitching Moment: Flaps Up
 - 8.2.1.1 Airfoil zero-lift pitching moment coefficient
 - 8.2.1.2 Airfoil aerodynamic center: x_{ac} and airfoil center of pressure
 - 8.2.1.3 Airfoil pitching moment variation with lift coefficient
 - 8.2.1.4 Airfoil linear range for pitching moment
 - 8.2.1.5 Construction of airfoil pitching moment curve: flaps up
 - 8.2.2 Airfoil Pitching Moment: Flaps Down
 - 8.2.2.1 Airfoil pitching moment increment due to flaps
 - 8.2.2.2 Construction of the flaps-down airfoil pitching moment curve
 - 8.2.3 Wing Pitching Moment: Flaps-Up
 - 8.2.3.1 Wing zero-lift pitching moment coefficient
 - 8.2.3.2 Slope of the wing pitching moment curve
 - 8.2.3.3 Prediction of stable or unstable pitch break
 - 8.2.3.4 Construction of the wing pitching moment curve: flaps-up
 - 8.2.4 Wing Pitching Moment: Flaps-Down
 - 8.2.4.1 Wing pitching moment increment due to flaps
 - 8.2.4.2 Slope of the wing pitching moment curve, flaps-down
 - 8.2.4.3 Prediction of stable or unstable pitch break: flaps-down
 - 8.2.4.4 Construction of the wing pitching moment curve: flaps-down
 - 8.2.5 Airplane Pitching Moment: Flaps Up
 - 8.2.5.1 Airplane zero-lift pitching moment coefficient
 - 8.2.5.2 Airplane pitching moment coefficient variation with lift coefficient
 - 8.2.5.3 Calculation of the aerodynamic center shift due to the fuselage
 - 8.2.5.4 Prediction of stable or unstable pitch break
 - 8.2.5.5 Construction of airplane pitching moment coefficient versus lift coefficient
 - 8.2.6 Airplane Pitching Moment: Flaps Down
 - 8.2.6.1 Airplane pitching moment coefficient increment due to flaps
 - 8.2.6.2 Slope of the airplane pitching moment curve flaps down
 - 8.2.6.3 Prediction of stable or unstable pitch break: flaps down
 - 8.2.6.4 Construction of the airplane flaps down pitching moment curve
 - 8.2.7 Airplane Pitching Moment in Ground Effect
 - 8.2.7.1 Ground effect on downwash and on upwash
 - 8.2.8 Power Effects on Airplane Pitching Moment
 - 8.2.8.1 Power effect on pitching moment at zero lift coefficient
 - 8.2.8.2 Power effect on longitudinal stability

**Airplane Design Part VI:
Preliminary Calculation of Aerodynamic Thrust and Power Characteristics
Table of Contents**

- 8.3 PREDICTION OF TRIMMED LIFT AND TRIMMED MAXIMUM LIFT COEFFICIENT
 - 8.3.1 Stable Airplane with Stable Pitch Break
 - 8.3.2 Unstable Airplane with Stable Pitch Break
 - 8.3.3 Stable Airplane with Unstable Pitch Break
 - 8.3.4 Unstable Airplane with Unstable Pitch Break
- 9. AIRPLANE HIGH LIFT DATA
 - 9.1 AIRFOIL HIGH LIFT DATA: FLAPS UP AND FLAPS DOWN
 - 9.2 AIRPLANE HIGH LIFT DATA: FLAPS UP AND FLAPS DOWN
 - 9.3 MACH NUMBER EFFECT ON HIGH LIFT
- 10. STABILITY, CONTROL AND HINGE MOMENT DERIVATIVES
 - 10.1 STEADY STATE COEFFICIENTS
 - 10.2 STABILITY DERIVATIVES
 - 10.2.1 Speed Derivatives
 - 10.2.1.1 Aerodynamic Speed Derivatives
 - 10.2.1.2 Thrust versus speed derivatives
 - 10.2.2 Angle-of-Attack Derivatives
 - 10.2.2.1 Aerodynamic angle-of-attack derivatives
 - 10.2.2.2 Thrust versus angle-of-attack derivative
 - 10.2.3 Rate of Angle-of-Attack Derivatives
 - 10.2.4 Angle-of-Sideslip Derivatives
 - 10.2.4.1 Aerodynamic angle-of-sideslip derivatives
 - 10.2.4.2 Thrust versus sideslip derivative
 - 10.2.5 Rate of Angle-of-Sideslip Derivatives
 - 10.2.6 Roll Rate Derivatives
 - 10.2.7 Pitch Rate Derivatives
 - 10.2.8 Yaw Rate Derivatives
 - 10.3 CONTROL DERIVATIVES
 - 10.3.1 Stabilizer Control Derivatives
 - 10.3.2 Elevator Control Derivatives
 - 10.3.3 Canard Control Derivatives
 - 10.3.4 Canardvator Control Derivatives
 - 10.3.5 Aileron Control Derivatives
 - 10.3.6 Spoiler Control Derivatives
 - 10.3.7 Differential Stabilizer Control Derivatives
 - 10.3.8 Rudder Control Derivatives
 - 10.4 HINGEMOMENT DERIVATIVES OF CONTROL SURFACES
 - 10.4.1 Two-Dimensional Control Surface and Tab Hingemoment Derivatives about the Control Surface Hingeline
 - 10.4.1.1 Two-D control surface hingemoment derivative due to angle of attack
 - 10.4.1.2 Two-D control surface hingemoment derivative due to control surface deflection
 - 10.4.1.3 Two-D control surface hingemoment derivative due to tab deflection
 - 10.4.2 Three-Dimensional Control Surface and Tab Hingemoment Derivatives
 - 10.4.2.1 Three-D control surface hingemoment derivative due to angle of attack
 - 10.4.2.2 Three-D control surface hingemoment derivative due to control surface deflection
 - 10.4.2.3 Three-D control surface hingemoment derivative due to tab deflection
 - 10.4.3 Two-Dimensional Tab Hingemoment Derivatives about the Tab Hingeline
 - 10.4.4 Three-Dimensional Tab Hingemoment Derivatives about the Tab Hingeline
- 11. STABILITY AND CONTROL DERIVATIVE DATA
- 12. USER'S GUIDE
 - 12.1 USER'S GUIDE FOR DRAG POLAR ESTIMATION
 - 12.2 USER'S GUIDE FOR DETERMINATION OF INSTALLED THRUST OR POWER
 - 12.3 USER'S GUIDE FOR DETERMINATION OF LIFT VERSUS ANGLE OF ATTACK
 - 12.4 USER'S GUIDE FOR THE DETERMINATION OF PITCHING MOMENT VERSUS ANGLE OF ATTACK AND THE TRIM DIAGRAM
