

# Airplane Flight Dynamics & Automatic Flight Controls: Part II

## Table of Contents

- 7. EFFECTS OF AEROELASTICITY ON STABILITY AND CONTROL
  - 7.1 EXAMPLES OF AEROELASTIC BEHAVIOR
    - 7.1.1 Aileron Reversal
    - 7.1.2 Wing Divergence
    - 7.1.3 Elevator Control Power Reduction due to Aft Fuselage Bending
  - 7.2 INTRODUCTION TO AERODYNAMIC AND STRUCTURAL INFLUENCE COEFFICIENT MATRICES
    - 7.2.1 Aerodynamic Influence Coefficients for Rigid Airplanes
    - 7.2.2 Structural Influence Coefficients for Elastic Airplanes
  - 7.3 STABILITY AND CONTROL CHARACTERISTICS OF ELASTIC AIRPLANES IN STEADY STATE FLIGHT
  - 7.4 STABILITY AND CONTROL CHARACTERISTICS OF ELASTIC AIRPLANES IN PERTURBED STATE FLIGHT
    - 7.4.1 Derivation of Elastic Airplane Stability Derivatives for Perturbed State Flight
    - 7.4.2 Interpretation and Use of Elastic Airplane Stability Derivatives
  - 7.5 DETERMINING THE JIG SHAPE OF ELASTIC AIRPLANES
    - 7.5.1 Determining the Jig Shape
    - 7.5.2 Determining the Equilibrium Angle of Attack Distribution
  - 7.6 DETERMINING LATERAL-DIRECTIONAL DERIVATIVES FOR ELASTIC AIRPLANES
    - 7.6.1 Determination of the Roll Damping Derivative for an Elastic Airplane
    - 7.6.2 Determination of the Directional Stability Derivative for an Elastic Airplane
  - 7.7 NUMERICAL EXAMPLES OF ELASTIC AIRPLANE STABILITY AND CONTROL DERIVATIVES
  - 7.8 CONTROL DERIVATIVES
    - 7.8.1 Numerical Examples: Longitudinal Stability Derivatives
    - 7.8.2 Numerical Examples: Lateral-Directional Stability Derivatives
  - 7.9 SUMMARY FOR CHAPTER 7
  - 7.10 PROBLEMS FOR CHAPTER 7
  - 7.11 REFERENCES FOR CHAPTER 7
- 8. THEORY AND APPLICATIONS OF BODE PLOTS
  - 8.1 INTRODUCTION TO THE FREQUENCY RESPONSE OF LINEAR SYSTEMS
  - 8.2 DETERMINATION OF THE FREQUENCY RESPONSE OF LINEAR SYSTEMS DIRECTLY FROM THE SYSTEM OPEN LOOP TRANSFER FUNCTION
  - 8.3 ASYMPTOTIC APPROXIMATIONS TO REAL FREQUENCY RESPONSE OF TRANSFER FUNCTIONS
    - 8.3.1 Differentiators and Integrators
    - 8.3.2 First Order Lead and Lag Transfer Functions
    - 8.3.3 Second Order Lead and Lag Transfer Functions
    - 8.3.4 Summary of Amplitude and Phase Angle Properties of First and Second Transfer Functions
  - 8.4 APPLICATIONS OF BODE PLOTS TO AIRPLANES
    - 8.4.1 Bode Plots for Speed, Angle of Attack and Pitch Attitude Angle Response to Elevator Inputs
    - 8.4.2 Bode Plots for Sideslip Angle, Bank Angle and Heading Angle Response to Aileron and Rudder Inputs
  - 8.5 AN INVERSE APPLICATION OF BODE PLOTS
  - 8.6 SUMMARY FOR CHAPTER 8
  - 8.7 PROBLEMS FOR CHAPTER 8
  - 8.8 REFERENCES FOR CHAPTER 8
- 9. CLASSICAL CONTROL THEORY WITH APPLICATIONS TO AIRPLANES
  - 9.1 EXAMPLE OF THE POTENTIAL OF FEEDBACK CONTROL
  - 9.2 BASIC RELATIONSHIPS AND DEFINITIONS USED IN FEEDBACK CONTROL SYSTEMS
  - 9.3 THE ROOT LOCUS METHOD
    - 9.3.1 Root Locus Fundamentals
    - 9.3.2 Root Locus Asymptotes
    - 9.3.3 Breakaway Angle from a Complex Pole
    - 9.3.4 Step-by-Step Construction of a Root Locus Diagram
  - 9.4 APPLICATION OF THE BODE PLOT METHOD TO CONTROL SYSTEM ANALYSIS
  - 9.5 CONNECTION BETWEEN THE FREQUENCY DOMAIN AND THE TIME DOMAIN
  - 9.6 SYSTEM PERFORMANCE SPECIFICATIONS
    - 9.6.1 Frequency Domain Specifications

# Airplane Flight Dynamics & Automatic Flight Controls: Part II

## Table of Contents

- 9.6.2 Time Domain Specifications
- 9.6.3 Error and Error Constant Specifications
  - 9.6.3.1 Error characteristics of unity negative feedback systems
  - 9.6.3.2 Error characteristics of general systems
- 9.6.4 System Sensitivity
- 9.7 SOME FEEDBACK CONTROL SYSTEM DESIGN APPLICATIONS
  - 9.7.1 A Multiple Feedback Loop System: Pole Assignment
  - 9.7.2 Setting System Gain to Achieve a Specified Damping Ratio
  - 9.7.3 Setting Gain to Achieve a Specified Gain Margin and Position Error Constant
  - 9.7.4 Finding Lag Compensation to Alter the Breakaway Angle from Complex Poles
  - 9.7.5 Finding a Lead-Lag Compensator to Increase System Gain Margin
  - 9.7.6 Using Cancellation Compensation to Achieve Better Closed Loop Characteristics
  - 9.7.7 Root Contours for Variable Poles
  - 9.7.8 Root Contours for Variable Zeros
- 9.8 SUMMARY FOR CHAPTER 9
- 9.9 PROBLEMS FOR CHAPTER 9
- 9.10 REFERENCES FOR CHAPTER 9
- 10. ANALYSIS OF AIRPLANE PLUS PILOT AS A CLOSED LOOP CONTROL SYSTEM
  - 10.1 THE HUMAN PILOT TRANSFER FUNCTION
  - 10.2 PILOT CONTROL OF BANK ANGLE
  - 10.2 PILOT CONTROL OF PITCH ATTITUDE ANGLE
  - 10.4 SUMMARY FOR CHAPTER 10
  - 10.5 PROBLEMS FOR CHAPTER 10
  - 10.6 REFERENCES FOR CHAPTER 10
- 11. STABILITY AUGMENTATION AND AUTOMATIC FLIGHT CONTROL SYSTEMS
  - 11.1 YAW DAMPERS
  - 11.2 PITCH DAMPERS
  - 11.3 STATIC STABILITY AUGMENTATION SYSTEMS
    - 11.3.1 Angle-of-attack Feedback to the Longitudinal Controls
    - 11.3.2 Load Factor Feedback to the Longitudinal Controls
    - 11.3.3 Sideslip Feedback to the Directional Controls
  - 11.4 BASIC AUTOPILOT SYSTEMS
  - 11.5 BASIC LONGITUDINAL AUTOPILOT MODES
    - 11.5.1 Pitch Attitude Hold Mode
    - 11.5.2 Altitude Hold Mode
    - 11.5.3 Airspeed or Mach Number Hold Mode
      - 11.5.3.1 Airspeed hold mode using autothrottles
      - 11.5.3.2 Airspeed hold mode using speedbrakes
      - 11.5.3.3 Mach hold using the elevator
      - 11.5.3.4 Mach tuck control (Mach trim)
    - 11.5.4 Control Wheel Steering Mode
  - 11.6 BASIC LATERAL-DIRECTIONAL AUTOPILOT MODES
    - 11.6.1 Bank Angle Hold Mode
    - 11.6.2 Heading Angle Hold Mode
    - 11.6.3 Turn Rate Mode at Constant Speed and Altitude
    - 11.6.4 Turn Coordination (Zero Lateral Acceleration)
  - 11.7 LONGITUDINAL NAVIGATION MODES
    - 11.7.1 Approach Categories and Guidance
    - 11.7.2 Glideslope Hold Mode
    - 11.7.3 Automatic Flare Mode
  - 11.8 LATERAL-DIRECTIONAL NAVIGATION MODES
    - 11.8.1 Localizer Hold Mode
    - 11.8.2 V.O.R. Hold Mode
  - 11.9 MULTIPLE LOOP, MULTIPLE VARIABLE CONTROL SYSTEMS
  - 11.10 SEPARATE SURFACE CONTROL SYSTEMS
    - 11.10.1 Introduction and Definitions

# Airplane Flight Dynamics & Automatic Flight Controls: Part II

## Table of Contents

- 11.10.2 Closed Loop Analysis of Separate Surface Control Systems
- 11.11 SUMMARY FOR CHAPTER 11
- 11.12 PROBLEMS FOR CHAPTER 11
- 11.13 REFERENCES FOR CHAPTER 11
- 12. FUNDAMENTALS OF DIGITAL CONTROL SYSTEM ANALYSIS
  - 12.1 INTRODUCTION TO SIGNAL SAMPLING
  - 12.2 LAPLACE TRANSFORMS AND SAMPLED DATA SYSTEMS
    - 12.2.1 The Uniqueness Problem
    - 12.2.2 The Laplace Transform of the Sampled Unit Step
    - 12.2.3 The Laplace Transform of the Sampled Function: $e^{-t}$
    - 12.2.4 On the Periodicity of: $e^{*}(s)$
  - 12.3 RECONSTRUCTION OF ANALOG DATA FROM SAMPLED DATA
    - 12.3.1 Introductory Observations
    - 12.3.2 The Zero Order Hold
    - 12.3.3 The First Order Hold
  - 12.4 FUNDAMENTALS OF Z-TRANSFORM THEORY
    - 12.4.1 Definition and Derivation of Z-Transforms
    - 12.4.2 Mapping of the s-Plane into the z-Plane
    - 12.4.3 Mapping of Constant Damping Loci
    - 12.4.4 Mapping of Constant Frequency Loci
    - 12.4.5 Mapping of Constant Damping Ratio Loci
    - 12.4.6 Mapping of Constant Undamped Natural Frequency Loci
    - 12.4.7 Inverse z-Transforms
    - 12.4.8 Important z-Transform Properties
  - 12.5 AN APPLICATION OF Z-TRANSFORMS
    - 12.5.1 The Pulse Transfer Function of Sampled Data Systems
    - 12.5.2 Closed Loop Sampled Data Systems
    - 12.5.3 A Simple Bank Angle Control System
  - 12.6 EFFECT OF SAMPLING FREQUENCY ON THE STABILITY OF DIGITAL SYSTEMS
    - 12.6.1 Jury's Test
    - 12.6.2 Routh-Hurwitz Criterion
    - 12.6.3 The Root-Locus Method
  - 12.7 RELATIONS BETWEEN THE S-, Z- AND TIME DOMAINS
  - 12.8 SUMMARY FOR CHAPTER 12
  - 12.9 PROBLEMS FOR CHAPTER 12
  - 12.10 REFERENCES FOR CHAPTER 12
- APPENDIX E: HARDWARE ASPECTS OF AUTOPILOT SYSTEMS
  - E1 AUTOPILOT AND SENSOR FUNDAMENTALS
    - E1.1 Pitch Attitude Angle,  $q$  and Bank Angle,  $\phi$
    - E1.2 Heading Angle,  $y$
    - E1.3 Angular Rates Such As:  $dy/dt$ ,  $dq/dt$  and  $d\phi/dt$
  - E2 AUTOPILOT MODES
  - E3 REFERENCES
